Feel the Difference

Many water supplies contain hardness minerals (calcium and magnesium), iron, rust and sediment. These minerals form a scale and create problems in water heaters, washing machines, dishwashers, coffee makers, humidifiers and plumbing systems. Beauchamp water conditioners and drinking water systems are designed to reduce these unwanted contaminants providing your family with a refreshing difference, saving you money now and in the years ahead.

Benefits of Beauchamp Water Treatment Systems

In the Bathroom: Your soap and shampoo will lather better. Your hair and skin will feel noticeably cleaner, softer and not as dry. Additionally, there will be no soap scum or mineral deposits to clean off sinks, showers, tubs and toilets.

In the Kitchen: Dishes will clean up more easily, and be spot-free, without the gray film glass gets when etched by mineral laden wear. Plus hands will feel softer and look better.

In the Laundry: Clothes will be softer, cleaner, whiter and brighter. Plus they will last longer. Using soft water and pure soap products increases the life of clothing, towels and linens up to 33%. Without hard water service issues, washing machines will last longer too.

Plumbing and Appliances: Appliances that use water will last longer and run better. Why? Because hot water heaters, washing machines and dishwashers using hard water can wear out 30% faster.

Over time, soft water savings can really add up. For instance, conditioned water not only delivers greater washing power, it reduces the amount of soap you need to use by up to 70%. In fact, the Bureau of Statistics found that between 17 and 20.8 cents of every dollar are spent on cleaning products. Soft water can reduce the bill by up to 65%. It can also eliminate extra rinse cycles and hot water. Plus using less detergent, household cleaners and chemicals is better for the environment.
**Twin Series Softeners**

Beauchamp brand water conditioners and filtration products provide homeowners with the best water treatment solutions. Your new Beauchamp water treatment system will fit your exact needs and provide you with years of quality, conditioned water.

**Gold Series Twin-Tank Control Valves**

Twin-tank systems provide your family with soft water 24 hours a day, seven days a week. That's because the second tank of soft water acts as a backup, ready to immediately provide soft water once 100% of the first tank is used. While the second tank is in service, the first tank regenerates, giving you all the advantages of continuous soft water.

**Time Tested Gold Series Twin**

Manufactured from high-tech Noryl(R)* material, Gold Series Twin 9100 valve has been engineered and tested to withstand the equivalent of 27 years of uninterrupted daily use.

15% savings in both water and salt

Unlike preset systems, the twin-tank system regenerates with soft water only when necessary. Plus it uses 100% of the tank in service. The end result? Fifteen percent savings in both water and salt**

**Electronic or mechanical.**

Your choice of the highly reliable 3200 mechanical timer or advanced SE electronic timer with easy programming and minimal parts.

**Large homes and families.**

Large families will appreciate the Gold Series Twin 9100 high flow capacity 1 inch control valve. You will have plenty of soft water to do laundry, take showers and run the dishwasher all at the same time.

Servicing SE Michigan
Twin Series Softeners

Only pennies per day to operate.
Choose the SE electronic timer, and you'll pay only $4.87 in electricity for the entire year. Choose the mechanical timer, and that cost is less than 25 cents per year!***

Additional Features of the Beauchamp Brand Water Conditioning Systems
High quality, cation water softener exchange resin. Tough, high density, polyethylene salt storage tank. Additional features available to match any decor. Full five year control valve warranty, ten year tank warranty.

It's true that city and well water quality meet standards set by the Government. However, these standards represent only minimum requirements. The tests to verify compliance are conducted at treatment plants. Lead and other pollutants can still enter your tap water through the miles of pipes they have to travel on the way to your faucet. Well water is also exposed to nitrates, nitrites, arsenic, pesticides, PFOS / PFOA, and other contaminants that can seep from the ground.

- Buying bottled water is a high-cost choice that is not environmentally friendly and contributes to our already over-flowing landfill problems.
- Attaching a disposable filter to your faucet or using a filtered water pitcher will eliminate some contaminants, but not nearly all. These products also require frequent and costly cartridge changes.

** Compared to a system with meter delayed regeneration and the reserve set at 30% of the system capacity, provided that half of the reserve capacity is unused.

*** Based on one regeneration per day at $0.0745/kw.

Is Your Tap Water Safe to Drink?

THE COST EFFECTIVE SOLUTION IS...

Beauchamp reverse-osmosis drinking water system

Install a Beauchamp reverse-osmosis drinking water system and have great tasting, contaminant free water directly from your faucet at a fraction of the cost of alternative options.
